

μ Wet Finisher Micro Wet Finisher

General Data

Width:	790mm
Depth:	730mm
Height:	620mm
Weight:	approx. 90kg

Electrical Supply

Power supply:
100 - 230V \pm 10% AC 50 - 60Hz

Power consumption: 1kVA

Accessories

3 grades of finishing discs 30 μ m, 20 μ m,
15 μ m

50 foam backing pads

Vacuum table mats for punched and un-
punched stampers

Tool kit, workbench

Optional accessories

Water recycling and filtration unit

The μ WF (Micro Wet Finisher) is designed to give a fast and smoother finish to the back of CD and DVD stampers. The flow of water enables a consistent finish down to Ra (roughness) 0.03 μ m and the improved cutting is capable of finishing stamper in fewer cycles.

The wet extraction and filtering of particles prevents dust entering the atmosphere. This assists user health and safety, whilst reducing the chance of cross-contamination with other processes. Nozzles situated around the sealed vacuum turntable direct jets of water onto the surface of the stamper, a water filtration unit recycles or drains the water.

A variety of finishes can be achieved with a range of different finishing disc grades, a lower Ra is particularly suited to recordable and high-density stampers, a rougher Ra benefits from greater consistency due to the wet process.
