The Auto Multi Diameter Punch amdp.38 has been specifically designed for companies wishing to produce stampers with two or more centre hole sizes, either for in-house use or for customer stamper services.

Up to six different diameters can be punched starting from a pre-punched 15 mm hole. The punch and die exchange is fully automatic and the result is excellent punched hole roundness.

The unit is pneumatically operated, safe, reliable and conforms to international safety standards.

The compact amdp.38 can be mounted on a purpose-built bench.
