

mbf.150

Matrix Back Finisher

General Data

Width:	780mm
Depth:	600mm
Height:	510mm
Weight:	approx. 90kg

Electrical Supply

Power supply:

110V±10%/3Ph/N/PE/50/60Hz

220V±10%/3Ph/N/PE/50/60Hz

Power consumption: 2kW

The mbf.150 has been designed to give a quick and consistent finish to the back of unpunched or punched stampers. The back finish of any stamper specification can be accurately controlled by pre-setting the turntable speed, orbital head speed, orbital head pressure, cycle time and grade of finishing disc.

The finishing head employs a random orbital motion ensuring an even surface finish. The finishing discs can be readily exchanged between cycles.

Dust is removed from the dry finishing process by a continuous flow of air across the stamper to the extraction unit.

Stampers can be finished in 15-30 seconds. Safety interlocks protect both operator and equipment during use and contribute to the mbf.150 conforming to international safety standards.

The compact mbf.150 can be mounted on a purpose-built bench.
